COTREX (Colorado Trail Explorer)

COTREX is a mapping software developed by the Colorado Parks and Wildlife. The software allows non-CRM users to view and access real-time web data and information about trails in Colorado. COTREX allows you to view and utilize Colorado trail data, including trails and trail closures, terrain, elevation, and other mapping data real-time.

COTREX is a FREE web and mobile trails and recreation data application that can be used in near real-time in Colorado. It is continually updated by 236 land managers, including those from State, local, and other mapping apps. The chief advantage to COTREX usage over other mapping tools is that trails and other data are continually updated, rather than static, and the data is accessible in a single application.

LCC is a part of the CMC Calendar. Sign up for the CMC Calendar to view all Bobcat trips. For more information about COTREX, visit the CMC Calendar. Just use the "Category Search" option and select "COTREX" to be notified of updates identifying CMC trips.
